

Maintenance

modulyss® makes quality carpet tiles that meet the strictest European standards, EN1307.

Our tiles are known for their strong character and for their optimal retention of appearance and colour. These properties not only guarantee a long life, but also make the cleaning of the carpet tiles easier and faster, which in turn means lower maintenance costs.

General

The lasting and beautiful character of a modulyss® carpet tile is determined by the right choice of the quality, colour and design of the tile.

Entrance to premises

The protection of an interior begins with optimal protection of the entrance. We recommend that an efficient clean-walk area be installed.

In heavily traffic interiors, it is best to opt for a carpet tile with dark colours and an irregular pattern. This gives the carpet a more dirt-concealing character.

Periodic maintenance

A systematic maintenance programme will suffice to lengthen the life of your carpet. A maintenance firm should be called in to provide professional guidance and support.

We recommend daily vacuuming and spot removal in heavily trod areas. Occasionally used areas should be vacuumed once a week.

Annual maintenance

We recommend annual powder cleaning for all interiors of the building where a modulyss® carpet tile has been installed.

Advantage of carpet tiles

Carpet tiles are installed in modular fashion, which means that a damaged tile can be easily removed and replaced by a new tile.
